## **DETAILED ACTION**

### ***Allowable Subject Matter***

The following is an examiner's statement of reasons for allowance: The present invention relates to a chip carrier and an electronic package for a high-frequency electronic device. Specifically, the Application claims a chip carrier comprising a first conductive layer having at least one signal track and at least one contact area, said contact area being electrically connected to said signal track and adapted for transmitting a high-frequency signal; and a reference structure including a first conductive reference track insulated and spaced from said first conductive layer, said first conductive reference track having a first portion and a second portion spacedly positioned from said first portion, and a second conductive reference track insulated from said first conductive layer and said first conductive reference track, a portion of said second ' conductive reference track spaced between said first conductive layer and said first conductive reference track, said signal track substantially overlying said portion of said second conductive reference track, and said contact area substantially overlying said first portion of said first conductive reference track, said signal track being electrically shielded by said reference structure. Claim 13 also recites a semiconductor chip on said carrier being interconnected to said at least one contact area.

The specific disposition of the conductive layers with respect one another, as recited in the claims, in combination with all other limitations in the claims make up for a device that is neither obvious over nor anticipated by the prior art of record. Therefore, the claims are hereby found allowable.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure includes DiStefano et al. (US6365975) wherein a chip carrier with multiple conductive tracks is shown.
